# Planning your sample project

## Are the displayed products available to order?

These are fictional food-production examples. The case sizes and prices show how a maker can present a wholesale range; no food is sold through this demo.

## Where are ingredients and allergens listed?

Each real production item would need its finalized ingredient and allergen label. The sample catalog shows pack formats and recipe concepts without making allergen-free claims.

## Can a case mix several flavors?

The standard examples use one recipe per case. A mixed sampler is listed separately because its packing and labeling scope differs.

## Is a private-label run possible?

A private-label brief would specify recipe, packaging, label responsibilities, and minimum quantity before sampling. No certification or shelf-life claim is implied by the example.

## Scope and ordering notes

Prices cover the quantity and specification stated on each product page. Artwork changes, delivery, installation and unusual materials are scoped separately where applicable. This demonstration does not accept orders or payments.

These are fictional food products. Final ingredient, allergen, storage and shelf-life labels would be required for a real product; the illustrations are not production packaging.

All photographs and landmarks were created for this fictional business. Product dimensions and specifications describe the authored demo range; images are illustrative.
