Planning your sample project

What files work best for printing?

A print-ready PDF with embedded fonts and 0.125 in bleed is preferred. Keep important details at least 0.25 in inside the trim edge.

Is a proof included?

Each listed run includes one digital proof and one round of small text corrections. Color-critical work can add a separately priced physical proof.

Can I order fewer pieces?

Shorter quantities can be scoped individually. Setup and finishing time mean the unit price may differ from the displayed bundle price.

When does production time begin?

A sample three-to-five-business-day production window begins after final proof approval. Complex finishing and delivery are quoted separately.
